ACC.i2 Interventional Cardiology

Learning Objectives

1. Determine an appropriate adjunctive and long-term antithrombotic regimen for diverse patients with acute coronary syndrome or undergoing a revascularization procedure
2. Interpret and integrate findings from adjunctive coronary and endovascular assessment into clinical decision-making
3. Decide whether and how to revascularize patients who are high-risk or have complex coronary artery disease
4. Evaluate the evidence from clinical trials describing outcomes, recent advances, and expanded applications of transcatheter aortic valve replacement (TAVR)
5. Appropriately incorporate new and state-of-the-art structural heart and endovascular technologies and techniques into patient care
6. Work effectively as part of a comprehensive care team to manage patients before, during, and after an interventional procedures
7. Apply findings from diagnostic imaging to plan treatment, guide intervention, and gauge procedural outcomes

ACC.16 Sessions Eligible for Continuing Pharmacy Education Credit

Acute Coronary Syndrome

Learning Objectives

1. Compare and contrast different STEMI systems of care and logistical processes for managing complex patients with ACS
2. Scrutinize the methodology of recent ACS clinical trials to determine the implications and generalizability of findings
3. Evaluate the evidence and different perspectives underlying current controversies in ACS management
4. Tailor the timing, selection, dosing, combination and duration of adjunctive and long-term antithrombotic therapy regimens for individual patients with ACS
5. Appropriately manage patients with presenting with out-of-hospital arrest, cardiogenic shock, and other MI complications
6. Develop a patient-centered, evidence-based post-discharge to minimize future cardiovascular risk and to promote patient well-being

Heart Failure and Cardiomyopathies

Learning Objectives

1. Integrate contemporary concepts on pathogenesis into the evaluation and management of patients with heart failure and cardiomyopathy
2. Offer practical guidance on diet, exercise, social support, and heart failure self-management that is appropriately tailored for diverse patients
3. Recognize the implications of sleep apnea, diabetes, chronic kidney disease, atrial fibrillation and other comorbidities on the management of heart failure
4. Evaluate the role and indications for ICDs, CRTs, hemodynamic sensors, and other cardiac devices for heart failure management
5. Identify patients with Stage D heart failure or cardiogenic shock that are appropriate candidates for specific pharmacotherapies, mechanical circulatory support, cardiac transplantation, and/or palliative care
6. Analyze the evidence on new and established pharmacotherapies for heart failure management
7. Participate in high-functioning teams and refine system processes to improve care quality and outcomes for patients with heart failure

Prevention

Learning Objectives

1. Describe the role of genetics in lipid metabolism, cardiovascular CVD risk, and response to pharmacotherapy and the clinical implications for CVD risk assessment and lipid management
2. Integrate point-of-care tools, evidence-based diagnostic testing, and shared decision-making into CVD risk assessment and risk factor management
3. Apply current evidence base to determine thresholds for hypertension treatment, establish therapeutic goals, and implement system-based processes to achieve timely blood pressure control
4. Recognize the implications of diabetes on cardiovascular disease and treatment outcomes and tailor management accordingly
5. Evaluate often conflicting recommendations as well as the underlying evidence on lipid management
6. Translate cardiovascular science and lessons learned to the professional practice environment
7. Critically examine important controversies in cardiovascular care
